Patent No. 6680188

Patent No. 6680188

AEPLICANT: WEBSTER, Marion et al
TITLE OF INVENTION: ISOLATED HUMAN KINASE PROTEINS, NUCLEIC
TITLE OF INVENTION: THEREOF
TITLE OF INVENTION: THEREOF
FILE REFERENCE: CL001164DIV
CURRENT APPLICATION NUMBER: US/10/238,709
CURRENT FILE NOS: 4
CURRENT FILING DATE: 2002-09-11
NUMBER OF SEQ ID NOS: 4
SOFTWARE: FASELSEQ for Windows Version 4.0
                                                                                                                                                                                                                                                       GENERAL INFORMATION:

/note="forgan: pancreas; Vector: pSPORT1 (GIBCO); Site_1:
Not I; Site_2: Sal I; The library was prepared by
Catherine S. Lee and has not been published. The pancreas
was obtained from Gerard Gradwohl (PNAS 97 P1607-1611,
2000). The CDNA's were prepared with an oligo containing a
NotI site, and Sall linkers were added to the ends. The
inserts were cut with NotI before being cloned into the
NotI-Sall sites in the vectors. This is one of two
libraries, ngn3 wt and ngn3 -/-. The wt library is in
-coopert T7 promoter is 5'."

Treated with T4 DNA polymerase, and purified by ethanol-precipitation. The cDNAs were ligated to Lone-linker Li-Sal4, purified by phenol/choroform, and separated from free linkers by Centricon 100. Then, the cDNAs were amplified by long-range high fidelity PCR using Ex Taq polymerase (Takara) with a primer Sal4-S. The products were purified by phenol/chloroform and Centricon 100. The cDNAs were digested with Sal1 and Not1 enzymes and cloned into Sal1/Not1 site of pCMV-SPORT6 plasmid vector. The DH10B E. coli host was transformed with the ligation mixture by the standard chemical method. The average insert size is about 2.8 kb. The library was constructed by Yulan Piao."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Rodentia; Sciurognathi; Muridae; Murinae; Mus. Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ð
                                        The invention relates to a novel isolated human kinase. The kinase peptides and nucleic acids are useful as models for the development of human therapeutic targets, in the identification of therapeutic proteins, and serve as targets for the development of human therapeutic proteins, and serve as targets for the development of human therapeutic agents that modulate kinase activity in cells and tissues that express the kinase.

The proteins can be used to raise or to elicit another immune response, as a reagent in assays designed to determine the levels of the protein in biological fluids, as markers for tissue in which the corresponding protein is preferentially expressed, in the identification of modulators of the peptides and in pharmacogenomic analysis. The nucleic acids are useful as hybridisation probes, in constructing vectors, host cells or transgenic animals expressing all or a part of the nucleic acid, for monitoring the effectiveness of modulating compounds on the expression or ectivity of the transporter gene in clinical trials or in treatment regimen, in gene expression in cells, tissue and organisms. The present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to human kinase proteins and nucleic acids encoding them all of which are useful in the development of human therapeutics and diagnostic composition and methods. The invention is useful as models for the development of human therapeutic targets, aid in the identification of therapeutic proteins and serve as targets for the development of human therapeutic proteins and serve as targets for the drug screening assays, in assays to determine the biological activity of the protein, to raise antibodies and to elicit another immune response. The antibodies are useful in pharamacogenomic analysis, for inhibiting protein function and for tissue typing. The transgenic animals are useful for studying the function of kinase protein, identifying and evaluating modulators of kinase protein activity. The invention is also used in gene therappy. The present sequence 1s the human kinase cDNA. The human, kinase gene is located on chromosome 12
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              polynucleotide. The polypeptide and polynucleotide of the invention are useful as models for the development of human therapeutic targets, aid in the identification of therapeutic proteins and serve as targets for the development of human therapeutic agents that modulate kinase activity in cells and tissues that express the kinase. The invention is also useful for biological assays related to kinases. The invention is also useful treating disorders characterized by an absence of inappropriate and unwanted expression of the protein. The present sequence is human kinase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated human kinase proteins and nucleic acids, useful for developing human therapeutic targets, identifying therapeutic proteins serve as targets for the development of human therapeutic agents that modulate kinase activity.

The present sequence encodes a human citron rho/rac-interacting kinase-short kinase polypeptide. The polymucleotide and polypeptide of the invention are useful in preventing, ameliorating, or treating diseases associated with the polypeptide dysfunction. The expression vector or the reagent is useful in the preparation of a medicament for modulating the activity of a human citron rho/rac-interacting kinase-short kinase in a disease, such as obesity or chronic obstructive pulmonary disease. These may also be used for treating obesity/ overweight-associated comorpidities, such as hypertension, diabetes, coronary artery disease, hyperlipidaemia, stroke, gallbladder disease, gout, osteoarthritis, sleep apnea, cancer, thrombolic diseases, polycystic ovarian syndrome, reduced fertility, and depression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         11 TCAAATATGGAGCGCGGAATCCTTTGGATGCTGGTGCTGCTGAACCCATTGCCAGCCGGG

The invention relates to human kinase PKIN proteins and their corresponding CDNAs. A composition containing PKIN agonist is useful for treating a disease or condition associated with decreased expression of FKIN and a composition comprising PKIN antegonist is useful for treating a disease or condition associated with overexpression of PKIN. The disease or condition associated with overexpression of PKIN. The disease or condition associated with overexpression of PKIN. The disease or condition associated with overexpression of PKIN. The construction of the pkin of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120

New NOVX polypeptides and nucleic acids, useful for diagnosing, preventing or treating NOVX-associated disorders, e.g. diabetes, obesity, cancer or dyslipidemia, and in chromosome mapping, tissue typing or pharmacogenomics

Claim 20; Page 100; 586pp; English.

The present invention describes NOVX proteins, where X can be 1 to 55

(e.g. NOV1). Also described: (1) a composition comprising a polypeptide
described above and a carrier; (2) a kit comprising in one or more
containers, the composition described above; (3) an isolated nucleic acid
molecule which encodes a NOVX protein of the invention; (4) a vector
comprising the nucleic acid molecule described above; (5) a cell
comprising the above vector; (6) an antibody that immunospecifically
binds to the polypeptide described above; (7) methods for determining the
presence or amount of the above polypeptide or nucleic acid molecule in a
sample; (8) methods for determining the presence of or presisposition to
a disease associated with altered levels of expression of the above
copypeptide or nucleic acid molecule in a first mammalian subject; (9) a
method of identifying an agent that binds to the polypeptide described
above; (10) a method for identifying a potential therapeutic agent for
cuse in treating a pathology that is related to an aberrant expression or
above; (10) a method for identifying a potential therapeutic agent for
cuse in treating a pathology that is related to an aberrant expression or
aberrant physiological interactions of the polypeptide; (11) a method of
correnting for a modulator of activity or of latency or predisposition to
corrected a pathology associated with the above polypeptide in a
correctivity of the polypeptide described above; (13) method for modulating
corrections of mammal; and (14) a method for producing the above polypeptide in a
correction and a method for producing and above polypeptide in a
correction and and an antidiabetic, anorectic, antibacterial, virucide,
immunomodulator, cytostatic, nootropic, neuroprotective, antiparkinsonian
immunication and an appearance of an another producing and antidiabetic, anorectice antibacterial, virucide,

The invention relates to a novel human protein that shares structural similarity with animal kinases, including serine-threonine kinases, particularly Citron rho-interacting kinases. The proteins of the invention have nootropic and cytostatic activity. The polynucleotides may have a use in gene therapy. The encoded novel polypeptides are useful for generating antibodies, as reagents in diagnostic assays, for identifying other cellular gene products related to NHP and as reagents in assays for screening for compounds that are useful in the treatment of mental, biological or medical disorders and diseases including cancer. The sequence encodes a novel human kinase of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       11 rcaaararcaagcgcggaarccrirgargcragracragaacccarraccaagcggg

The invention relates to an isolated polymorecture encouring a numban citron rho/rac-interacting kinase polymorphide. The isolated polymorphide comprises a 6165 or 8603 base pair sequence, given in the specification. The human citron rho/rac-interacting kinase (CRIK)

Colympetide and polymucleotide are useful in preventing, ameliorating, or treating diseases associated with human CRIK dysfunction such as obesity and obseity-associated comorbidities (e.g. hypertension, coronary artery disease, hyperlipidaemia, stroke, gout, osteoarthritis, some types of cancer including endometrial, breast, prostate and colon cancer)

CC cancer including endometrial, breast, prostate and colon cancer)

CC cancers, anxiety disorders, Parkinson's disease or Alzheimer's disorders, anxiety disorders, parkinson's disease or Alzheimer's clisorders, anxiety disorders, parkinson's disease or Alzheimer's clisorders and security bulmonary disease, or diabetes. The human CRIK polypeptide is also useful in diagnostic assays or in genetic testing.

CT he expression vector or the reagent is useful in preparing a medicament for modulating the activity of a human CRIK in a disease, e.g. obesity, a central nervous system disorder, or chronic obstructive pulmonary disease. The fusion protein is useful for generating antibodies against a CRIK polypeptide and for use in various assay systems. The methods are cuseful in producing and detecting the polymucleotide and polypeptide and in screening for agents that modulate the activity of the human CRIK polypeptide. This polymucleotide sequence represents a DNA sequence correlating to the human CRIK protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               190
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             120

The invention relates to a novel human protein that shares structural similarity with animal kinases, including serine-threonine kinases, particularly Citron rho-interacting kinases. The proteins of the invention have nootropic and cytostatic activity. The polynucleotides may have a use in gene therapy. The encoded novel polypeptides are useful for generating antibodies, as reagents in diagnostic assays, for identifying other cellular gene products related to NHP and as reagents in assays for screening for compounds that are useful in the treatment of mental, biological or medical disorders and diseases including cancer. The sequence encodes a novel human kinase of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 in gene
